INTERNSHIP WORK

WEEK 1

Task 1: Screenshots Of Output

index-basic-page : boilerplate + h1–h3 hierarchy

WEEK 1 - DAY 1 - INDEX.HTML

Hamdan Ali

Software Engineering Student · Air University, Islamabad

Introduction

I'm a Software Engineering student in my sixth semester at Air University, Islamabad, with a strong interest in full-stack web development, artificial intelligence, and systems design. I enjoy turning ideas into working products, whether that means wiring up a REST API, structuring a database, or polishing the last few pixels of a user interface.

What I work with

My day-to-day toolkit spans C++, Python, and JavaScript, with hands-on experience across OOP, data structures, and classic AI search algorithms. On the web side, I build interfaces with HTML, CSS, and React.

C++

Python

JavaScript

React

MySQL

HTML / CSS

Why I'm here

This internship is my Week 1 starting point for full-stack web development — beginning with the fundamentals of semantic HTML and building up, day by day, toward complete responsive interfaces.

Current focus

Structuring clean, accessible HTML documents and getting comfortable with the building blocks every real-world web page is made of.

Task 2: Screenshots Of Output

personal-profile — bio, hobbies/foods lists, monogram avatar, social links

WEEK 1 — DAY 2 · PERSONAL PROFILE PAGE

Hamdan Ali

Software Engineering Student · Islamabad, Pakistan

About Me

I'm a sixth-semester Software Engineering student at Air University, Islamabad, building experience across full-stack web development, AI search algorithms, and database-driven systems. Outside of coursework, I lead an IEEE Computer Society chapter and have a long background in community and youth leadership.

- Founding a new IEEE Computer Society chapter at Air University, serving as President.
- Started as a Boy Scout troop leader from a young age — my first real experience organizing people around a goal.
- Active member of the Youth General Assembly, engaging in youth-led policy and civic events.
- Comfortable working across the stack, from C++ algorithms to responsive React interfaces.

Hobbies & Interests

- Exploring UI/UX trends — glassmorphism, Bento-grid layouts, and interface design systems.
- Community organizing and mentoring, carried over from years of Scout leadership.
- Reading about emerging AI tooling and experimenting with small side projects.
- Following Pakistani streetwear and cultural design work.

Task 4: Screenshoots Of Output

homepage-layout — semantic header/nav/main/footer

Task 5: Screenshoots Of Output

resume-project — full resume in pure HTML (About, Education table, Skills, Projects as articles, Contact form, Footer)

Hamdan Ali

Software Engineering Student — Full-Stack & AI

hamdanaly651@gmail.com · (+92) 345-8162409 · [linkedin.com/in/hamdan-ali1](https://www.linkedin.com/in/hamdan-ali1) · Islamabad, Pakistan

About Me

Software Engineering student with hands-on experience in C++, Python, and core computer science concepts including OOP and data structures & algorithms. I've worked on AI-based and database-focused projects — a voice assistant, management systems, and small games — alongside solid web development experience building responsive, user-focused interfaces with React, HTML, and CSS. I enjoy building practical, easy-to-use software and working with others to solve problems effectively.

Experience

- **Founding Member — IEEE UCP / Computer Society**
2023 – 2024
- **General Member — Youth General Assembly**
2024 – Present
- **Private Home Tutor**
2017 – 2020, 2022

Projects

Jarvis AI Assistant

Python voice assistant with speech recognition, TTS, and command handling.

CRM Web Application

Modular React interface for managing customer records.

Hospital Database

Normalized MySQL database for patient and staff records.

Karigaar (FYP)

On-demand home services marketplace with escrow payments and CNIC verification.

Task 8: Screenshoots Of Output

header-sidebar-layout — fixed header + sticky sidebar dashboard, position/display in action

Karigaar.admin

Week 2 – Task 8 · Header / Sidebar / Content layout (display & positioning)

Overview

Bookings

Workers

Payments

Verification

Settings

Overview

A snapshot layout demonstrating a fixed header, a sticky sidebar, and a scrollable content region.

ACTIVE BOOKINGS

128

VERIFIED WORKERS

64

ESCROW HELD

Rs 214,500

OPEN TICKETS

7

Layout Notes

The header uses `position: fixed` to stay pinned to the top of the viewport. The sidebar uses `position: sticky` so it tracks scrolling within the content shell without leaving the layout flow. The content column uses `display: flex` at the shell level and `display: grid` for the stat cards, keeping everything aligned without relying on floats.

Task 9: Screenshoots Of Output

navbar-flexbox-cards — responsive flexbox navbar that collapses on mobile + card grid

Hamdan.dev

HomeProjectsSkillsContact

WEEK 2 – TASK 9 · RESPONSIVE NAVBAR & FLEXBOX CARDS

Selected Projects

A responsive card grid built entirely with Flexbox — resize the window or view on mobile to see the navbar collapse and the cards reflow.

FYP

Karigaar

On-demand home services marketplace for Pakistan, with escrow payments, CNIC verification, and rule-based worker matching.

React NativeNode.jsMySQL
